

Versaic doesn't use cookies with the aim of collection of user personal information and doesn't use user information in marketing programs. For all cookies which are using in Versaic application, once the user closes browser, the cookie simply terminates. In Versaic's application is using the following cookies:

Cookies name	Usage
_ga	<p>This cookie name is associated with Google Universal Analytics. This cookie is used to distinguish unique users by assigning a randomly generated number as a client identifier. It is included in each page request in a site and used to calculate visitor, session and campaign data for the site's analytics reports.</p> <p>The main purpose of this cookie is: Distinguish unique users, determine which domain to measure, throttle the request rate, remember traffic source information, determine the start and end of a session.</p>
ai_session	<p>This cookie is associated with the Microsoft Application Insights software, which collects statistical usage and telemetry information for apps built on the Azure cloud platform. This is a unique anonymous session identifier cookie.</p> <p>The main purpose of this cookie is: Performance</p>
ai_user	<p>This cookie is associated with the Microsoft Application Insights software, which collects statistical usage and telemetry information for apps built on the Azure cloud platform. This is a unique user identifier cookie enabling counting of the number of users accessing the application over time.</p> <p>The main purpose of this cookie is: Performance</p>
ASP.NET_SessionId	<p>General purpose platform session cookie, used by sites written with Microsoft .NET based technologies. Usually used to maintain a user session. The session id is then stored on a cookie on the user's browser. While the user stays logged in, the cookie would be sent along with every subsequent request. The server can then compare the session id stored on the cookie against the session information stored in the memory to verify user's identity and sends response with the corresponding state.</p> <p>The main purpose of this cookie is: Strictly Necessary</p>
VersaicApp	<p>This cookie contains authentication token, generated once the user logs in. While the user stays logged in, the cookie would be sent along with every subsequent request. The authentication token is signed and encrypted. It contains information for user authorization.</p>

*ASP.NET\_SessionId* and *VersaicApp* cookies have "HttpOnly" flag. It informs the browser that this special cookie should only be accessed by the server. Any try to access the cookie from client-side script is strictly forbidden.

Also, *ASP.NET\_SessionId* and *VersaicApp* cookies have set "Secure" flag. When a "Secure" flag is used, then the cookie will only be sent over HTTPS, which is HTTP over SSL/TLS. When this is the case, the attacker eavesdropping on the communication channel from the browser to the server will not be able to read the cookie (HTTPS provides authentication, data integrity and confidentiality).
